Litter bins

RAMAGE litter bin

5 THE[®]
ITALIAN
LAB

Dimensions: Diam. 450, H 810 mm

The body of the RAMAGE litter bin is made by calendaring a steel sheet sp. 20/10. The lid is made of sheet steel, th. 30/10 and is fixed to the basket by a three sturdy hinge sp. 30/10; the closure is ensured by the spring lock with a self-centering triangular key thanks to the special fork.

On the body, by laser cutting, variable size carvings are made that recall the design of stylized tree branches. Inside there is a container made of pre galvanized steel sheet sp. 6/10 powder coated PP., With nr 2 slotted holes that

act as handles.

A 10 mm elastic band is attached to the inner container to fix the waste bag. All the steel elements are subsequently cold galvanized and powder coated with PP.

Ground fixing takes place through special M8 bolts (not supplied).

Optional: throw cigarettes on the lid, made of steel sheet subsequently galvanized and powder-coated PP. For piercing cigarettes a perforated mesh is welded (5 mm diameter holes).
